Assistant for exploring scientific literature

Andrew Yates
Status: hiring PhD

Goal: support literature exploration with a scientific assistant that helps identify relevant literature and pinpoint relevant information within it.

The assistant will learn from the user's feedback to refine its representation of the user's information need and better locate relevant information.

Milestones:
user-initiated and
agent-initiated changes

Approach:
transparent neural
representations of
information need, which
an LLM agent modifies
to satisfy fine-grained
info need
